

Raahi

A way forward

Intelligent travel disruption recovery

PS ID 2

Hackathon prototype

One delay puts the whole day at risk

+3h

Mumbai–Goa flight delay

The traveler must rebuild the day across separate bookings.

Booking	What breaks
Airport shuttle	11:50 cutoff missed
Hotel check-in	Arrival plan disrupted
16:00 concert	Original plan no longer fits

Illustrative trip: ready at the airport at 14:30 after the delay.

One workspace for the recovery

See the impact. Compare feasible plans. Review every change.

CONNECTED ITINERARY

Visible dependencies and affected bookings

CLEAR CHOICES

Cash, event timing and time to rest

The screenshot displays the Raahi Trip workspace interface. At the top, the Raahi logo is on the left, and navigation links for 'Trip workspace', 'My itinerary', and 'Behind the journey' are in the center. A user profile icon with the letter 'R' is on the right. Below the header, a green banner prompts the user to 'Tell Raahi what matters. Explore the AI copilot demo.' The main content area is divided into three sections. The left section, titled 'Your itinerary', shows a timeline for Saturday, 26 Sep, with events like 'Mumbai → Goa · GOI', 'Baggage & airport exit', 'Airport shuttle', 'Casa Sol · check-in', 'Included venue pickup', and 'Mandovi riverside concert'. The middle section, titled 'Your recovery options', shows three options: 'Spend less' (₹800), 'Take a breather' (₹1,800), and 'Keep the moment' (₹2,300). The right section shows a 'Flight delayed 3 hours' notification and a 'Landing later. Let's reconnect the day.' message. A 'Cash available now' toggle is also present.

EVERY CONNECTION COUNTS

Your itinerary v3

Original bookings, with the disruption shown

Sat, 26 Sep All times in IST

12:45 Mumbai → Goa · GOI Changed

14:00 Baggage & airport exit Changed

12:00 Airport shuttle Needs repair

14:00 Casa Sol · check-in Needs repair

14:35 Included venue pickup Needs repair

16:00 Mandovi riverside concert Needs repair

Flight delayed 3 hours Change scenario

Landing later. Let's reconnect the day. 5 dependent items

Ready at 14:30. Shuttle boarding closes at 11:50. Your onward plans need a new connection.

Follow the ripple effect

Keep my 16:00 concert Protect the original session

Cash available now Refunds later don't add to this limit ₹ 3000 Update

A FEW GOOD WAYS FORWARD 3 options fit

Your recovery options

Spend less Lowest cash option Later concert · shuttle to hotel ₹800 cash needed now Concert session 18:00

Take a breather More breathing room Later concert · 45 min hotel rest ₹1,800 cash needed now Concert session 18:00

Keep the moment Original moment saved Original concert · hotel afterwards ₹2,300 cash needed now Concert session 16:00

Connected bookings reveal the ripple effect

Each segment carries timing, location and dependency constraints.

Segment	Depends on	Constraint Raahi checks
Airport shuttle	Flight and airport exit	Ready before the pickup cutoff
Hotel check-in	Transfer to the hotel	Arrival inside the check-in window
Concert arrival	Transfers and luggage plan	At the venue before 15:45

A feasible replacement must work across the entire route.

Three feasible plans for different priorities

Illustrative flight-delay scenario. Fixture prices in INR.

Recovery	Cash needed now	Concert	Hotel rest
Spend less	₹800	18:00 session	0 min
More breathing room	₹1,800	18:00 session	45 min
Keep the original concert	₹2,300	16:00 session	0 min

₹400 prepaid loss stays separate from new cash needed. Future refund: ₹0.

The traveler's priorities stay protected

“I must make the 4 PM concert.”

₹2,000

No feasible recovery

The engine preserves the hard limit and explains the conflict.

₹2,500

Original concert protected

A valid plan needs ₹2,300.
The traveler can review it.

A conversational copilot, with an engine behind it

*“Keep my 4 PM concert
and stay under ₹2,500.”*

The demo maps this request to an explicit
budget and protected event.

The engine validates the options.
The traveler confirms the preferences.

AI interpretation is simulated. Feasibility calculations are real.

A clear boundary between advice and action

- 01 **Interpret** Authored demo requests map to structured preferences.
- 02 **Validate** Pure TypeScript checks time, location, cash and availability.
- 03 **Review** The API regenerates the plan and checks its signed review.
- 04 **Apply** Confirmation saves the itinerary. Supplier actions stay simulated.

Next.js + React UI Zod command validation Independent recovery engine

Ready for the prototype round

3

disruption scenarios

Flight delay
Concert cancellation
Combined disruption

COMPLETE RECOVERY LOOP

Dependency impacts and risk warnings
Recovery comparison and cost review
Saved itinerary after confirmation

NEXT INTEGRATIONS

Live inventory and policy evidence
Model interpretation and supplier execution

13 tests passed. Production build and mobile recovery flow verified.

Raahi

*A way forward
for the whole trip*

Next round: a complete recovery, live

Change the disruption or budget.
Watch the engine adapt, then save the plan.
